# FULL-ARCH IMPLANT REHABILITATION

LIVE PATIENT COURSE

FAIR

FEATURING:
- Lecture
- Live Surgery
- Prosthetic Procedures

IMPLANT SEMINARS
IMPLANT DENTISTRY EDUCATION

Full Arch Implant Rehabilitation Live Patient course with Dr. Garg is one where you can learn when this type of procedure would be appropriate and useful.

Transforming your life and the lives of your patients is, as you know, what Implant Seminars is all about. But what if there was a way to do even more? Dr. Garg's Full-Arch Implant Rehabilitation technique provides that remarkable opportunity. For patients suffering terminal dentition or severe edentulism all it takes is a single visit, just one day of surgery, to bring their oral health dreams to life!

This course is **designed for clinicians with advanced experience in implant dentistry who are eager** to provide solutions for full-arch immediate-load prosthesis in partially edentulous patients and those with terminal dentition.

Learn From:
Lecture • Live Surgery • Prosthetic Procedures

***Learn the surgical** and **prosthodontic protocols** and **procedures required** to provide, full-arch immediate-load prosthesis for your patients.*

The Full Arch Implant Rehabilitation (FAIR™) concept is an additional procedural approach to traditional single-tooth implant placement. It is designed to assist patients who are determined to maximize chairsideefficiency and who are excited to achieve a fast, efficient, single-day prosthetic solution for their mouth restoration needs. The concept employs four or five screw-retained angled implants overlaid with the most durable prosthetics. Thanks to the latest technological advances only a few implants, properly placed and angled, can support multiple prosthetic teeth.

Course Outline

Day 1: *Lecture* given by Dr. Arun K. Garg on Full Arch Implant Rehabilitation
Day 2: *Live Patient Surgery* by you and full conversion chair-side (Only applicable for the 3-day program)
Day 3: *Live Patient Surgery* by you and full conversion chair-side

After this course, the participant will:

√ Plan patient selection, reviewing indications and contraindications.

√ Recognize pre-treatment procedures.

√ Evaluate surgical protocols and considerations.

√ Review restorative measures.

√ Apply laboratory procedures.

√ Plan conversion of a denture to a fixed temporary prosthesis.
