Implant Prosthetics

Hands-On Live Patient Program

South Beach
Dental Training Institute

COURSE OVERVIEW

Implant prosthetics is exciting and multi-faceted. We have developed this three-day course to provide clinicians with the knowledge and hands-on live patient experience they need to tackle all aspects of dental implant prosthetics. The course will review a thorough step-by-step process whereby restorations of hybrid cases, fixed crowns and bridge and overdenture cases will be covered.

COURSE SPECIFICS

Introduction to Implant Prosthetics

- Review implant prosthetic terminology
- Learn the functional and mechanical differences between natural teeth and implants
- Understand the structural characteristics of implants, shapes and surfaces, etc., as well as biomechanical functioning
- Know the different types of prosthesis that can be made

Patient Selection

Models

- Indications and contraindications of implant placement
- Initial examination for physical inspection regarding patient viability

Radiological Guide and Surgery

- Use of a wax-up for diagnostic purposes
- Use of surgical guides to ensure proper implant alignment and positioning

Abutments

- What type of abutments to use and when
- Characteristics and indications of machine-milled, over pressed machine-milled and cast abutments
- Cement vs screw-retained prosthesis

Impressions

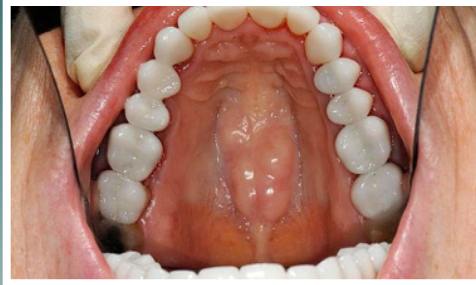

- How to take the best impressions and a review of the differences between natural teeth and implants
- Review of open and closed tray techniques along with materials required for casting
- Key objectives of impressions over implants

Temporary Prosthesis

- Why a temporary prosthesis is necessary
- Review of the different types of temporary prosthesis available
- Concepts related to immediate loading

Single Prosthesis

- Learn the different characteristics between anterior and posterior
- How to make a single prosthesis over an implant
- Understand anterior risk factors
- Review the distribution of occlusal forces in the posterior and in relation to implant crown

Partial Prosthesis

- Discuss and implement proper materials used
- Understand occlusal forces as related to partial prosthesis
- Preparation specifics for anterior and posterior

Complete Fixed Prosthesis

- Review and implement the Full arch and hybrid prosthesis concept
- Identify components used for a complete fixed prosthesis
- What occlusion is used for implant supported (fixed) prostheses

Implant Retained Overdentures

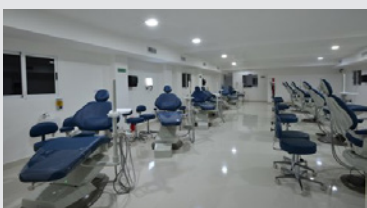

- What is an overdenture
- Indications and contraindications of use – identifying the ideal patient
- Understanding overdenture subtypes i.e. “implant supported,” “mucosa-implant-supported,” etc.

As evidenced from above, completing implant prosthetics is a highly detailed, nuanced procedure. Even if you are already placing implants and performing the prosthetic component in your dental practice, chances are you haven't delved this deeply into the subject matter before.

So prepare for an amazing program and get ready to take your implant prosthetic skills to the next level – AND BEYOND!
