

ZYGOMATIC Implant Course

LIVE SURGERY

Presurgical Planning, Surgical Procedures and Protocols

This comprehensive, step-by-step course covers presurgical and surgical treatment planning, surgical procedures, and clinical protocols for placing zygomatic implants as a nongrafting alternative for rehabilitation of the atrophic maxilla in carefully selected patients.

Attendees will gain hands-on experience using cadaver specimens under the supervision of a highly experienced surgeon.

COURSE OBJECTIVES

- The intramaxillary surgical protocol for zygomatic implants and its extramaxillary modification.
- Anatomical and radiographic evaluation procedures.
- Patient selection and treatment planning processes
- Impression-taking and laboratory procedures
- How to manage complications.

Morning Lecture followed by Afternoon LIVE PATIENT to understand completely the surgery and prosthetics and the workflow.

Held in Phoenix, Arizona, take your skills to next-level success with this must-take course for the advanced surgeon.
